What is the Limbo Crypto Game?

Limbo is a crash-style casino game, though it varies slightly from traditional crash video games where a multiplier line rises continually up until it crashes. Rather, Limbo is a target-multiplier game.

When a gamer opens a Limbo game, they set up two main criteria:

1. **The Bet Amount:** How much cryptocurrency they wish to wager on the round.
2. **The Target Multiplier:** The payout multiplier they wish to accomplish (e.g., 2x, 10x, 100x, or even up to 1,000,000 x).

As soon as these are set, the player initiates the round. The game generates a random number. If the created number is **greater than or equivalent to** the target multiplier, the gamer wins their bet increased by that target. If the created number falls short, the bet is lost.

How Limbo Works: The Mechanics Behind the Bets

To understand why Limbo is so popular in the crypto gambling community, one must take a <https://bitz.io/games/limbo-02> look at its core engine: **Provably Fair algorithms**.

Unlike conventional online casinos where game outcomes are computed on a black-box server, crypto-native video games utilize cryptographic hashing (generally utilizing SHA-256). Before a bet is placed, the casino produces a hashed variation of the winning result. After the round concludes, players can verify the math to make sure the gambling establishment did not manipulate the result.
