How Casino and Online RPS Works

1. **Player vs. House (RNG or Live Dealer):** The player wagers versus the casino. In automated versions, a Random Number Generator identifies your home's throw, usually offering basic payouts (e.g., 2x for a win, 0x for a loss, and a push/refund on a tie). In live dealership settings, a human dealership tosses at the same time with the gamer.
2. **Gamer vs. Player (P2P/ Crypto Betting):** Two human gamers secure their wagers into a smart agreement or escrow service. Both gamers submit their encrypted choices, which are exposed concurrently to prevent unfaithful. The winner takes the pot, minus a small platform charge (rake).

Payment Structure Example

Outcome Requirement Multiplier Description **Win** 1.95 x to 2.00 x Player beats the challenger's option. **Loss** 0x Player's choice is beaten by the opponent. **Tie/ Draw** 1.00 x (Refund) Both gamers select the same product; bets are returned.
