The Anatomy of a Plinko Board

- **The Drop Zone:** The top of the board where players launch the disc.
- **The Peg Field:** A staggered grid of metal or plastic pins. Every time a disc hits a pin, it has a roughly 50% chance of bouncing either left or right.
- **The Multiplier Slots:** The collection bins at the very bottom, each assigned a specific multiplier value.

The Mathematics Behind the Bounce

Since of the way the pegs are arranged [plinko game](#) in rotating rows, the course of the chip simulates a binomial circulation (frequently pictured as a Galton board). This implies chips are statistically far more most likely to land

in the center slots than in the extreme external slots. To stabilize this out, online variations designate lower multipliers to the center and significantly higher multipliers to the edges.
