- **The Ascent:** Players begin at the bottom row. Each row provides several hidden alternatives (tiles/blocks). One or more of these choices contains a "hazard" (like a bomb, skull, or monster), while the rest include multipliers.
- **The Choice:** The player picks one tile per row. If they choose a safe tile, their overall win multiplier boosts, and they advance to the next row. If they struck a threat, the game ends, and their stake is lost.

- **Pros:** High win frequency; minimizes catastrophic losses.
- **Cons:** Slower profit accumulation; a single loss on row 3 can clean out gains from previous small wins.

2. The Fixed-Target Strategy

- **How it works:** The player decides beforehand to constantly stop at a specific milestone (e.g., Row 5). Despite how tempting it is to press higher, the gamer cashes out as soon as Row 5 is successfully reached.
