The core facility is simple:

2. All gamers open the specific same cases at the same time in real-time.
3. The system tracks the total market price of all the skins dropped during the battle.
4. **The winner takes all:** The player who pulls the highest cumulative skin value walks away with each and every single product stopped by all participants in the battle.

How a Standard Case Battle Works

While various platforms use varying user interfaces and guideline sets, the basic circulation of a case battle follows a structured process:

- **Lobby Creation:** A player creates a public or personal space and selects which cases will be opened. They also pick the gamer count (1v1, 1v2, 1v3, or 2v2 group battles).
- **Buy-in:** Each participant must transfer funds or skins equivalent to the total cost of the selected cases to go into the lobby.
- **The Drop Phase:** Once the lobby fills up and begins, the virtual unboxing begins round-by-round. Players view as items fly past on their screens.
- **Tallying the Spoils:** After the final case is opened, the website determines the Steam Market or third-party worth of each player's drops.
- **Payout:** The winner (or winning team) gets their initial drops plus the drops of their opponents.
