Gamers put a stake and navigate a grid filled with covert tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The goal is easy: reveal as lots of multipliers as possible without clicking a mine. Each effective click increases the gamer's possible payout, while hitting a mine lead to the loss of the present stake. The core appeal of the game lies in the "cash out" mechanic, which enables players to secure their earnings anytime before proceeding to the next tile.

How the Game Mechanics Work

The game relies on a Provably Fair algorithm, guaranteeing that the placement of mines is randomized and proven. When a round begins, the server creates a grid-- usually 5x5-- and disperses an established number of mines throughout it. The gamer then interacts with the grid in the list below sequence:

1. **Setting the Parameters:** Before the very first click, the player chooses their bet quantity and the variety of mines they wish to include in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The gamer clicks a tile. If it is a multiplier, the balance increases, and the gamer can pick to "Cash Out" or continue.
3. **The Risk:** If a mine is activated, the round ends quickly, and the stake is forfeited.
4. **The Multiplier Growth:** The more mines picked at the start, the greater the multiplier for each effective tile opened.

Comprehending Risk vs. Reward

The table below shows how different mine counts affect the prospective growth of a gamer's preliminary stake.

Variety of Mines	Multiplier (Tile 1)	Multiplier (Tile 5)	Multiplier (Tile 10)
1 Mine	1.04 x	1.22 x	1.55 x
3 Mines	1.13 x	1.85 x	3.65 x
5 Mines	1.23 x	2.80 x	9.80 x
10 Mines	1.53 x	8.80 x	115.00 x
