The results are thought about long-term due to the fact that the fat is gone for great! Throughout a CoolSculpting appointment, a roll of fat is positioned in between 2 rounded panels that cool down the fat to a cold temperature. After, the treatment location is rubbed, damaging down the fat cells further, creating better outcomes. At Dermatology of Seattle, CoolSculpting therapies are carried out under the supervision of board-certified skin specialists at our Burien and Bellevue offices. Because the damaged fat cells are completely gotten rid of-- they do not regrow-- the outcomes are thought about long-term as long as the person preserves a secure weight. At UniQ Laser, our licensed professionals utilize the most recent CoolSculpting modern technology to make certain also results, convenience, [Cryolipolysis Fat Freezing](#) and safety and security in every session.

# Why is my stomach larger after fat cold?

Experiencing an increase in apparent fat promptly after a fat-freezing procedure can be disturbing, however it is usually a short-lived circumstance. Swelling, liquid retention, and the body's all-natural action to the treatment are normal factors for this sensation.

The chilly from the popsicle reduced fat in those locations, sparking the concept for fat-freezing therapies. Non-invasive body contouring devices and treatments are performed on the skin surface. The summaries are arranged by whether the modern technology is thermal (cools or warms cells) or non-thermal (does not amazing or heat tissue).

## What Do Doctors Say About Coolsculpting?

If that appears familiar, you are not the only one, and you are refraining anything incorrect. Subcutaneous fat in specific physiological areas is biologically resistant to caloric shortage; it is among the last tissue the body picks to metabolize. CoolSculpting, the FDA-cleared cryolipolysis system removed in 2010, was designed exactly for this situation.
