Platform designers normally program specific drop rates (probabilities) for different tiers of products. While specific percentages differ depending upon the platform, a standard rarity hierarchy usually applies.

Typical Item Rarity Tiers

Tier Rarity Level Approximate Drop Rate Description **Tier 1** Common/ Consumer ~ 79.9% Basic products with basic styles and low market worth. **Tier 2** Uncommon/ Industrial ~ 15.9% Slightly more detailed items, still very typical. **Tier 3** Uncommon/ Mil-Spec ~ 3.2% Noticeable visual upgrades; basic staples of most inventories. **Tier 4** Categorized/ Restricted ~ 0.64% Highly stylized items with distinct visual themes. **Tier 5** Covert/ Classified ~ 0.13% Premium products; highly searched for by collectors. **Tier 6** Special/ Exceedingly Rare ~ 0.26% (Total for leading tier) Ultra-rare products, such as knives, gloves, or secret drops.

Note: Percentages are approximations based upon publicly readily available industry data and community screening; individual video games may vary.

The Economics of Digital Items

Case opening does not exist in a vacuum; it is greatly connected to provide and demand economics. When an item is unboxed, its fate is normally chosen by the user.

What Happens to Unboxed Items?

1. **Equipping:** The user keeps the product to display in-game.
2. **Trading:** The product is traded directly with other users through peer-to-peer networks.
3. **Market Listing:** The item is offered on main markets or third-party platforms for genuine or platform currency.
