Mechanic	Description	Strategic Value/ Pro-Tip
Pathing/ Mazing	Forcing enemies to walk a longer route utilizing positioned towers. Maximizes the "time-under-fire" for your damage dealers. Create serpentine paths instead of straight lines.	
Targeting Priorities	Setting towers to target the <i>First</i> , <i>Last</i> , <i>Strongest</i> , or <i>Weakest</i> opponent. Avoids overkill on weak minions and guarantees heavy-hitters are focused down early.	
Resource Economy	Getting currency (gold/energy) via kills, interest, or dedicated farms. Balance financial investment: spending too much on defense starves you of development; hoarding gold leads to being overwhelmed.	
Essential Weaknesses	Matching particular damage types (Fire, Ice, Lightning) to enemy armor types. Ice slows fast units; Fire offers damage-over-time to high-health targets. Exploit these multipliers.	
Active Abilities	Worldwide spells (meteor strikes, freezes, reinforcements) with cooldowns. Save these for "manager waves" or emergency situation leakages where standard towers stop working.
