Motivated by the classic limbo dance-- where gamers attempt to go *under* a bar set at a particular height-- Limbo gambling asks gamers to set a target multiplier. The goal is simple: if the game generates a multiplier that is *equal to or greater* than the gamer's selected target, the player wins. If it falls short, the bet is lost.

Many contemporary Limbo video games include an amazing theoretical multiplier range, frequently stretching from a modest **1.01 x** all the way approximately **1,000,000 x** (or in some cases even greater).

## How Limbo Works: The Mechanics

Comprehending the mechanics of Limbo is straightforward, making it accessible to newbies while offering adequate depth for skilled bettors. Here is a step-by-step breakdown of a typical round:

1. **Set the Bet Amount:** The gamer chooses just how much cryptocurrency or fiat currency they wish to bet on the round.
2. **Select a Target Multiplier:** The gamer inputs their desired target multiplier (e.g., 2.00 x, 10.5 x, 500x).
3. **Examine the Win Probability:** As the target multiplier changes, the game automatically calculates and shows the statistical win likelihood (based on a built-in House Edge, normally around 1% to 2%).
4. **Hit "Bet":** The player triggers the round.
5. **The Reveal:** The game creates a random result. If the outcome fulfills or goes beyond the target, the gamer wins their stake multiplied by their target.

### Example Scenario

Imagine a gamer wagers £ 10 and sets their target multiplier to **5.00 x**.

- **Win Condition:** The game's random number generator (RNG) produces an outcome of 5.00 x or greater.
- **Payment:** The gamer wins £ 10 × 5.00 = £ 50 (a £ 40 net revenue).

- **Loss Condition:** The game produces an outcome of 4.99 x or lower. The player loses their £ 10 stake.

## Target Multipliers vs. Win Probabilities

Due to the fact that Limbo enables gamers to easily pick their target multiplier, comprehending the mathematical relationship in between the target and the odds of winning is vital.

Below is a table highlighting how altering the target multiplier impacts the win possibility (presuming a requirement 1% house edge):

Target Multiplier Win Probability (%) Payout on a £ 10 Bet Threat Level **1.01 x** 98.02% £ 10.10 Incredibly Low **2.00 x** 49.50% £ 20.00 Low/ Balanced **5.00 x** 19.80% £ 50.00 Moderate **10.00 x** 9.90% £ 100.00 High **50.00 x** 1.98% £ 500.00 Really High **100.00 x** 0.99% £ 1,000.00 Severe **1,000.00 x** 0.099% £ 10,000.00 Lottery Style

As the table shows, higher multipliers yield enormous payouts, but the analytical likelihood of striking them drops drastically.
