2. A chip, ball, or disc is dropped from the top of a triangular grid filled with staggered pegs.
3. As gravity pulls the disc down, it bounces randomly off the pegs, changing instructions with every effect.

Players can generally adjust the volatility of the game by changing the danger level.

- **Low Risk:** The multipliers in the center slots are better to 1x (or greater), while the external edges use modest payments. This setting leads to regular, smaller wins, making bankrolls last longer.
- **Medium Risk:** A balanced approach where main slots hover around break-even or slight losses, and external slots offer attracting, moderate multipliers.
- **High Risk:** The vast majority of central slots lead to a loss (multipliers less than 1x), however the severe outer edges use huge payouts, in some cases reaching up to 1000x the preliminary stake or more.

2. Row Counts

Most digital Plinko boards allow gamers to choose the number of peg rows, normally varying from 8 to 16.

- **More Rows (e.g., 16):** Expands the pyramid, creating a larger circulation curve and allowing access to the highest available multipliers on the far edges.

3. Game Modes: Manual vs. Auto
