

For people dealing with back pain, neck discomfort, headaches, injuries, or changes in mobility, chiropractic care can provide a non-invasive approach to evaluating and managing musculoskeletal concerns.

[Mill Creek Chiropractic Clinic](#) has served Mill Creek, Washington, and surrounding communities since 1984. The clinic provides personalized chiropractic care for a range of conditions and [Mill Creek Chiropractic Clinic](#) patient needs, including back and neck pain, auto accident injuries, headaches, sciatica, disc injuries, pregnancy care, pediatric care, and shoulder pain.

Dr. Ryan Doerge and Dr. Michael Young work with patients to evaluate their symptoms, movement, health history, and individual goals before [Mill Creek Chiropractor](#) recommending an appropriate care plan.

What Is Chiropractic Care?

Chiropractic care is a hands-on healthcare discipline focused primarily on the musculoskeletal and neuromusculoskeletal systems. Chiropractors evaluate areas such as joint movement, spinal function, range of motion, posture, and muscle tension to identify factors that may be contributing to pain or limited mobility.

Treatment recommendations vary by patient and may include chiropractic adjustments, therapeutic exercises, mobility work, ergonomic guidance, and other conservative approaches.

Car Accident and Whiplash Care in Mill Creek

Motor vehicle collisions can affect the neck, back, shoulders, and other areas of the body. Whiplash is commonly associated with rear-end collisions and may cause symptoms such as neck stiffness, headaches, reduced range of motion, shoulder discomfort, and upper-back pain.

Some symptoms may not be obvious immediately after an accident. A chiropractic evaluation can help assess spinal and joint movement, muscle tension, range of motion, and other musculoskeletal findings after a collision.

Mill Creek Chiropractic Clinic has experience evaluating and caring for patients following motor vehicle accidents. Treatment is individualized according to the patient's examination findings, symptoms, health history, and type of injury.

Chiropractic Care for Back Pain

Back pain can develop for many reasons, including prolonged sitting, lifting, repetitive activity, injury, [Chiropractor](#) joint restrictions, muscle strain, and other underlying conditions.

A chiropractic examination can help evaluate how the spine and surrounding joints are moving and determine whether conservative care may be appropriate. Depending on the individual, a care plan may include chiropractic adjustments, exercises, movement recommendations, and strategies to reduce recurring strain.

More information is available on the clinic's [back pain treatment](#) page.

Neck Pain, Stiffness, and Reduced Mobility

Neck discomfort may be associated with an injury, prolonged computer or smartphone use, repetitive movements, sleeping positions, or other musculoskeletal factors.

Rather than relying on symptoms alone, chiropractic evaluation considers movement, range of motion, posture, joint function, and the circumstances surrounding the problem. This can help determine an appropriate approach to care or whether additional evaluation may be necessary.

Headaches and Musculoskeletal Factors

Headaches have many possible causes, and not every headache is related to the neck or musculoskeletal system. However, certain headaches may occur alongside neck stiffness, muscle tension, restricted movement, or prolonged postural strain.

Mill Creek Chiropractic Clinic evaluates spinal movement, posture, range of motion, and other factors when determining whether chiropractic care may be appropriate for a patient experiencing headaches.

Visit the clinic's [headache care](#) page for additional information.

Care for Disc Injuries, Sciatica, and Shoulder Pain

The clinic also works with patients experiencing disc-related symptoms, sciatica, shoulder discomfort, and other musculoskeletal concerns. Because similar symptoms can have different causes, an examination is important before determining an appropriate treatment plan.

Care may focus on improving comfortable movement, addressing joint restrictions, supporting mobility, and helping patients return to normal daily activities when appropriate.

Pregnancy and Pediatric Chiropractic Care

Chiropractic care is not limited to adults seeking treatment for injuries or back pain. Mill Creek Chiropractic Clinic also provides pregnancy and pediatric chiropractic services.

Techniques and treatment approaches are adapted to the patient's age, size, health history, and individual needs. Pregnant patients may also have different biomechanical and comfort considerations as their bodies change throughout pregnancy.

Personalized Chiropractic Care with Dr. Ryan Doerge and Dr. Michael Young

Mill Creek Chiropractic Clinic's approach begins with understanding the individual patient rather than applying the same treatment plan to everyone.

[Dr. Ryan Doerge and Dr. Michael Young](#) provide chiropractic care at the Mill Creek office and bring training in chiropractic evaluation, adjusting techniques, movement, and conservative musculoskeletal care.
