How Weapon Cases Work

The opening process follows a deterministic algorithm that appoints a random "grade" to each possible item, and the possibility circulation is fixed for each case. The typical circulation is:

- 1. **Acquire a case**-- gotten as a random drop after a match or purchased from the marketplace.
- 2. **Purchase a key**-- most cases need a specific key (e.g., "Case Key", "Chroma Key", "Gamma Key").
- 3. **Open the case**-- the customer generates a random number that selects an item grade; the rarest products (normally "Covert" or "Extraordinary") appear with the most affordable probability.

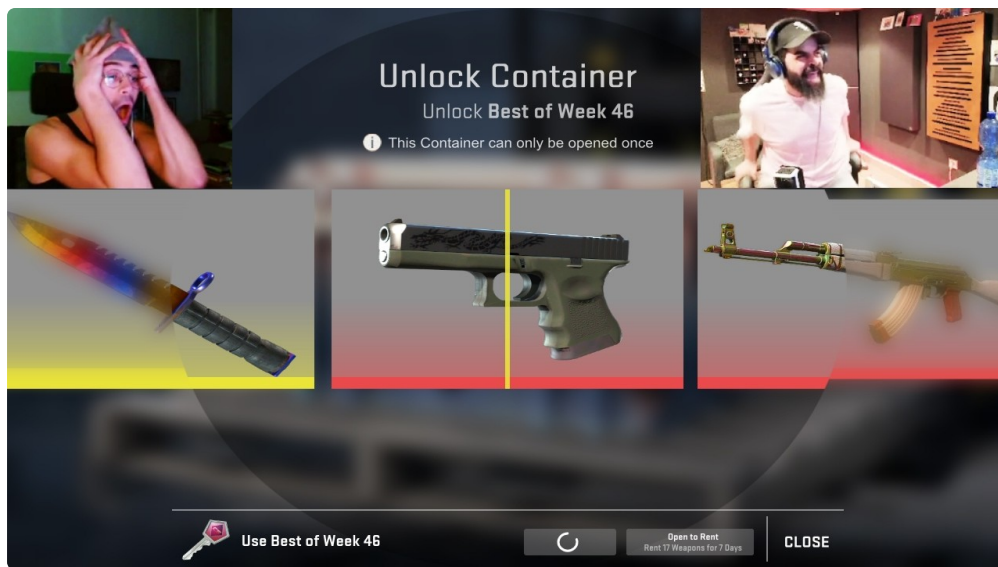

The odds are openly recorded by Valve. For the majority of modern-day cases, the probability of acquiring a Covert skin is approximately **2.5%**, while the opportunity of an Extraordinary (特殊) product-- the most desirable-- is about **0.25%**.
