2. **Locating the Ideal Integration Point**
    - The Ghost 2 system is purposefully little-- approximately the size of a deck of cards-- permitting it to be concealed deep within the vehicle's circuitry loom.
    - Professional installers will never put the system in apparent locations (such as directly behind the guiding column or glovebox). They splice it into the CAN-bus electrical wiring harness in a concealed location, making it essentially difficult for a thief to discover and get rid of.
3. **Circuitry and CAN-Bus Integration**
    - The unit is connected to the CAN-bus high and low data lines, long-term 12V power, and an earth point.
    - Soldering and professional-grade heat shrinking are normally utilized rather than inexpensive crimp ports to ensure long-lasting reliability and prevent loose connections.
4. **Programming the PIN Code**
    - Once set up, the system is powered up, and the installer programs the initial emergency situation code and sets the system with the customer's preferred button sequence (e.g., *Volume Down x3, Rear Demist x2, Hazard Lights x1*).
