

EMDR Therapy in London: How It Fits Alongside Hypnotherapy at Harley Street

EMDR, or eye movement desensitisation and reprocessing, is not the same thing as hypnotherapy, and at Hypnotherapy 4 Freedom the two are kept distinct even though they are often used together. For clients researching hypnotherapy in London specifically for trauma related issues, understanding how EMDR fits into the picture is useful before booking anything. EMDR was originally developed for trauma and has a strong track record for processing specific difficult memories, whether that is a single distressing event or a pattern built up over years. Stuart Downing is [hypnotherapy in London](#) a qualified EMDR practitioner alongside his hypnotherapy training, which means a client dealing with PTSD, a specific traumatic memory, or a deeply rooted phobia can be offered EMDR, hypnotherapy, or a blend of both depending on what the situation calls for. In practice, many clients benefit from EMDR handling the specific memory or trigger while hypnotherapy and NLP work on the broader patterns of anxiety or avoidance that have built up around it over time. This layered approach is part of why Hypnotherapy 4 Freedom describes itself as using whichever combination of techniques is most likely to help, rather than applying one method to every client who walks through the door. The Harley Street clinic setting, in London's established medical district and two minutes from Oxford Circus, suits **group hypnotherapy London** this kind of paced, sometimes longer term trauma work well, since sessions can be built into an ongoing routine rather than a single one off visit. Anyone considering EMDR or a combined approach as part of hypnotherapy in London support is encouraged to raise it during the free initial consultation. Not every client needs or wants EMDR, and it is never presented as a required part of trauma work here. Some prefer to work entirely through hypnotherapy and coaching at a gentler pace, particularly in the early stages before they feel ready to process a specific memory directly. Others find that knowing EMDR is available, should they want it later, makes the whole process feel less daunting from the outset. The choice is discussed openly during the initial consultation and can be revisited at any point as the sessions progress. Clients are welcome to ask about the difference between the two approaches at the free consultation stage, well before any decision needs to be made. Hypnotherapy 4 Freedom Address: 1 Harley Street, London W1G 9QD, United Kingdom Phone: +44 7825 599340 FAQ About Hypnotherapy in London How much does hypnotherapy cost in London? Prices vary between practitioners and clinics across the city, often depending on location, experience and session length. Hypnotherapy 4 Freedom offers a free 30 minute consultation before any paid session, so cost and a realistic session plan can be

discussed openly before committing to anything. Sessions are progress led rather than sold as a fixed package, so the total number needed depends on the individual issue being addressed. Is hypnotherapy available on the NHS? Hypnotherapy is generally treated as a complementary therapy rather than a standard NHS treatment, so most people access it privately. Hypnotherapy 4 Freedom, based at 1 Harley Street, works alongside a client's existing GP or specialist care rather than replacing it. Anyone already under NHS care for a mental health condition is encouraged to keep that relationship in place while exploring hypnotherapy as additional support. What conditions can hypnotherapy treat? Hypnotherapy is commonly used for anxiety, stress, sleep problems, phobias, stopping smoking and other habits, and building confidence, among other issues. At Hypnotherapy 4 Freedom, sessions also cover more specialist areas such as OCD, PTSD and trauma, addiction, and weight management, drawing on clinical hypnotherapy, NLP and EMDR depending on what the individual client needs. A free consultation call is the best way to discuss whether a specific issue is a good fit for this kind of work. Is hypnosis safe? Hypnosis is generally considered safe when carried out by a properly trained and insured practitioner. Stuart Downing at Hypnotherapy 4 Freedom is a Clinical Hypnotherapist and Master Practitioner of NLP with full professional indemnity insurance, working from a private consulting room on Harley Street. Clients remain aware and in control throughout a session, contrary to the loss of control often portrayed in stage hypnosis. Who is not suitable for hypnotherapy? Hypnotherapy is not usually recommended for people experiencing active psychosis or certain severe mental health conditions without medical oversight. Hypnotherapy 4 Freedom's free 30 minute consultation is used partly to screen for this, ensuring hypnotherapy is a suitable and safe option before any paid session is booked at the Harley Street clinic. Where it is not suitable, clients are pointed toward more appropriate support instead. What are the disadvantages of hypnotherapy? Hypnotherapy is not a guaranteed quick fix, and results depend on the individual, the issue being addressed, and how many sessions are genuinely needed. Hypnotherapy 4 Freedom is upfront about this during the free consultation, setting realistic expectations rather than promising a fixed outcome from a single session. Sessions are reviewed for progress along the way, so the approach can be adjusted rather than locking a client into a package that is not working. Can hypnotherapy help with weight loss? Hypnotherapy for weight loss typically works by addressing the underlying habits and emotional triggers behind eating patterns, rather than functioning as a diet plan on its own. At Hypnotherapy 4 Freedom, weight related sessions combine hypnotherapy with coaching techniques to help build sustainable change over a course of Harley Street based sessions. Results vary between individuals depending on the specific pattern involved. Can hypnotherapy help with overthinking? Hypnotherapy can help calm the kind of repetitive, anxious mental chatter often described as overthinking by working directly on the nervous system's stress response. Hypnotherapy 4 Freedom's approach in London combines clinical hypnotherapy with NLP techniques aimed at interrupting these automatic thought patterns rather than only addressing the surface level worry. Many clients booking anxiety focused sessions describe overthinking as one of their main concerns. What can hypnosis not do? Hypnosis cannot make someone act against their own will, erase memories, or cure a physical medical condition on its own. Hypnotherapy 4 Freedom is clear about this during every free consultation, positioning hypnotherapy as complementary support that works alongside a client's own motivation and, where relevant, alongside existing medical care rather than replacing it. Being upfront about these limits is part of setting honest expectations from the first phone call. Do doctors recommend hypnotherapy? A number of doctors and health professionals recognise hypnotherapy as a useful complementary option for specific issues such as anxiety, IBS and habit change, alongside conventional treatment. Hypnotherapy 4 Freedom encourages clients to keep working with their GP or specialist throughout, and Stuart Downing's training includes EMDR and clinical hypnotherapy specifically suited to working alongside other forms of care. It is not typically positioned as a first line medical treatment on its own. Which is better, CBT or hypnotherapy? Neither approach is universally better, since CBT and hypnotherapy work in different ways and suit different people and different issues. Hypnotherapy 4 Freedom's blended approach, combining clinical hypnotherapy with NLP and coaching techniques, is designed to be tailored to the individual rather than applying one fixed method to every client walking through the Harley Street clinic's door. Some clients benefit from combining structured talking therapy with hypnotherapy rather than choosing

only one. Why is hypnotherapy sometimes viewed with scepticism? Hypnotherapy's association with theatrical stage hypnosis has left many people unsure what a genuine clinical session actually involves. Hypnotherapy 4 Freedom addresses this directly during the free consultation, explaining clearly what a session at 1 Harley Street actually looks like, a calm, guided conversation rather than anything resembling a stage act. Clients remain fully aware and in control throughout, which tends to surprise people expecting something quite different.
